DYNAMIC PPF

Dynamic PPF is the next step in automotive paint protection technology, merging the worlds of color change and paint protection to create an end result that is highly durable and extremely paint-like. Our thermoplastic polyurethane structure is the perfect choice for keeping your vehicle pristine from minor chips and road debris. Experience the depth of each color while amplifying the enjoyment of every drive with added peace of mind knowing your vehicle is protected with the best. It's time to make the jump!

FEATURES OF DYNAMIC PPF

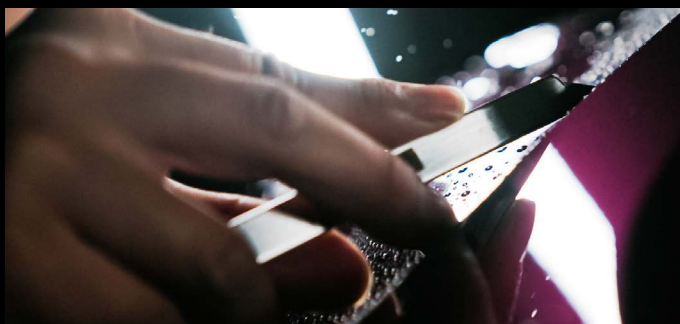

ADVANCED PROTECTION

Protect your vehicles OEM paint with state of art film technology that delivers advanced levels of durability, depth, and shine due its thermoplastic polyurethane structure.

SELF HEALING & STAIN RESISTANT

A highly durable top coat allows for a film that is resistant to most stains and can self-heal minor scratches and abrasions.

ULTRA-HIGH GLOSS

Experience the next evolution in color change technology with a film that is free of texture and orange peel, offering unmatched depth to the colors and delivering the greatest paint-like finish.

5-YEAR WARRANTY

Dynamic PPF is backed by our 5-Year Limited Warranty that ensures the film is free from manufacturing defects, yellowing, delamination, bubbling, or cracking.

COLOR-CHANGE PPF

Enjoy the benefits that come with Paint Protection Film while completely overhauling the look and feel of your vehicle through a full color change!

CUSTOMIZE YOUR COLOR

Dynamic PPF is offered in a variety of colors with new additions added regularly.

FREQUENTLY ASKED QUESTIONS (FAQ)

Is this product wet apply or dry apply?

Dynamic PPF is a wet-apply paint protection film therefore the installation procedures are similar to those commonly used with traditional paint protection films.

What are the benefits of Dynamic PPF?

Dynamic PPF offers a multitude of benefits ranging from outstanding protection of your OEM paint, self-healing of minor scratches, stain resistance, and of course its top of the line finish delivering true depth and shine.

Why Dynamic PPF instead of vinyl?

PPF delivers more protection over standard PVC color change film due to its thermoplastic polyurethane layer and highly durable top coat. This means that instead of simply changing the color of your vehicle, you are adding long lasting protection for years to come along with a superior finish.

Is Dynamic PPF easy to maintain?

Yes, Dynamic PPF is very easy to maintain however certain procedures must be followed. It is recommended to wash the vehicle every 10-14 days using a pH balanced soap such as Inozetek Car Wash Soap followed by a coat of Inozetek Wrap Shine or comparable quick wax in between washes.

Is this film hydrophobic?

Dynamic PPF is non-hydrophobic in order to achieve full overlap during installation without the risk of lifting or peeling down the line. A ceramic coating may be applied after installation to add a layer of hydrophobic coating to the top coat.

Can you overlap Dynamic PPF?

Yes, due to the non-hydrophobic top coat within Dynamic PPF, true overlaps are possible to achieve full coverage on a vehicle.

Is it recommended to park indoors or outdoor?

With any film, it is always advised to park indoors or away from direct UV when possible. That said, Dynamic PPF is built to last with its thermoplastic polyurethane layers that help withstand the elements so long as routine maintenance is performed.

What is the expected lifespan of this film?

The lifespan of the film is heavily dependent on the aftercare process and how well the vehicle is taken care of but it is rated from the factory with a 5-year guarantee. The film should perform well beyond this if taken care of.

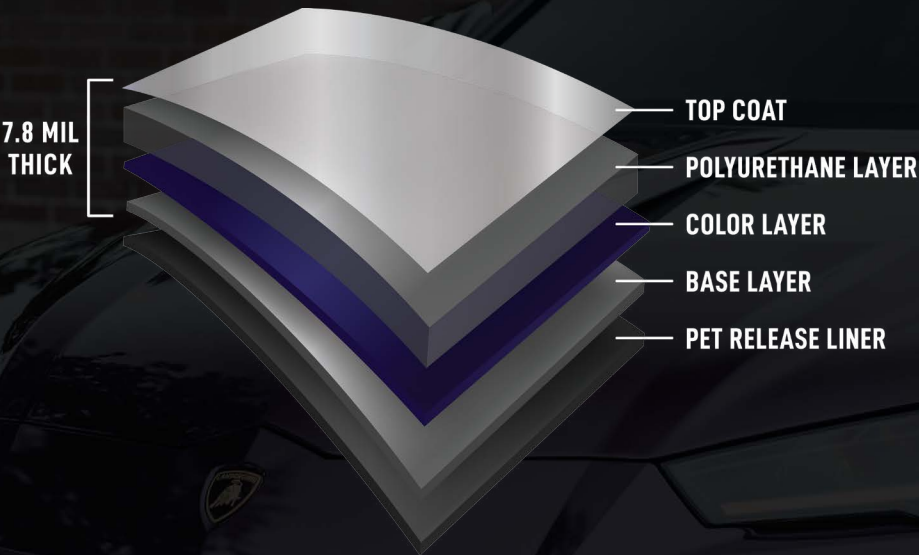

What is the warranty?

Dynamic PPF is backed by our 5-Year Limited Warranty against any manufacturing defects, yellowing, delamination, bubbling, or cracking.
